METVOEV

Experience

- Metadev, Founder (2016-current)
- OpenAPI Initiative BGB member (2018-current), ISA-Group, University
 of Seville

- Icinetic, CTO CRO (2012-2016)
- Capgemini, Software Architect & Manager (2005-2011)
- CARE Technologies, Lead Researcher, SW Engineer (1999-2004)
- UPV, Research Fellowship (1998-1999)

METADEV

Startup founded in 2016.10 in Sevilla. Self-funded 4 employees **full remote.**

Customers in SFO, London, Madrid, Valencia, & Sevilla

Sectors: banking, fintech, taxes, cloud computing, education, industrial, SW development, & consulting.

What we do?

Build tools for creating DSLs on the Web.

Provide the best high-quality code
 generation tailored to customer needs.

• White-boxed code-gen. Evolving at the same pace of the architecture of the app.

```
component Filter
event searching(text: string)

layout = Horizontal
label
text = "Filter:"
textbox tSearch
value = "sample"
button bSearch
text = "Search"
click() => search()
button bClear
text = "Clear"
click() => clear()
```

Design

Separation of Concerns (SoC)

Know-How captured in two separated buckets:

What

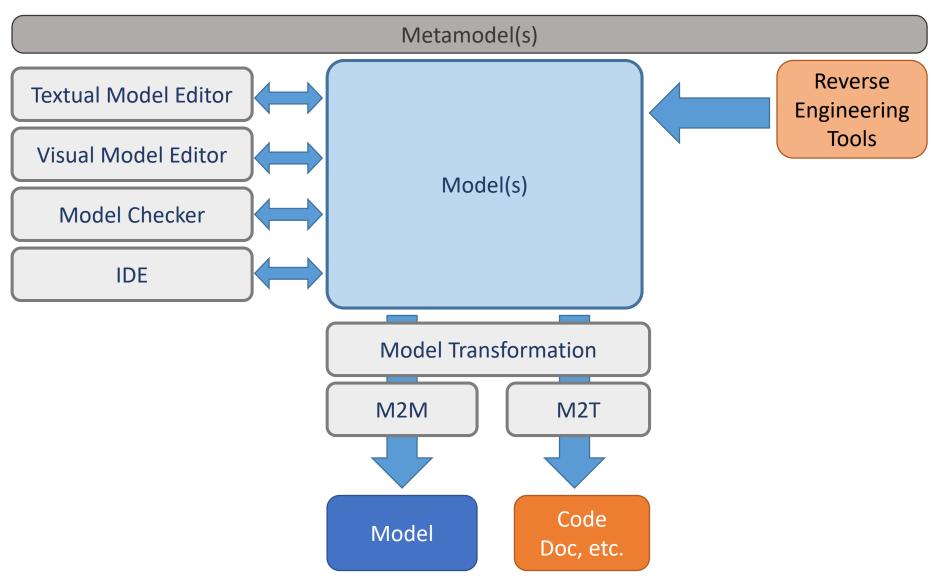

Business Know-How: captured in form of models (specifications): isolated from technological issues

How

 Technological Know-How: captured & encapsulated in form of

best practices, frameworks, templates & code patterns in code generators & interpreters.

Tooling matters

Conceptual Map for Code Generation

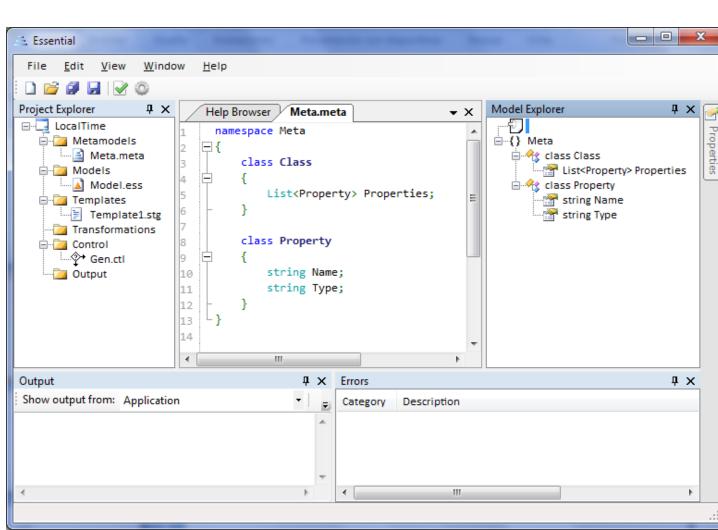

Essential

- **Essential** (2009-2019)
 - IDE and a runtime for creating code generators
 - Declarative, Clean
 - Fast
 - Promotes reuse
 - Forward engineering approach

http://pjmolina.com/essential

A use case: Web Components

- Web Components are standardized technology by W3C to bring to browsers:
 - Components
 - Properties
 - Events
 - Palette of Reusable Components
- The Visual Basic & Delphi Model... on the web!...

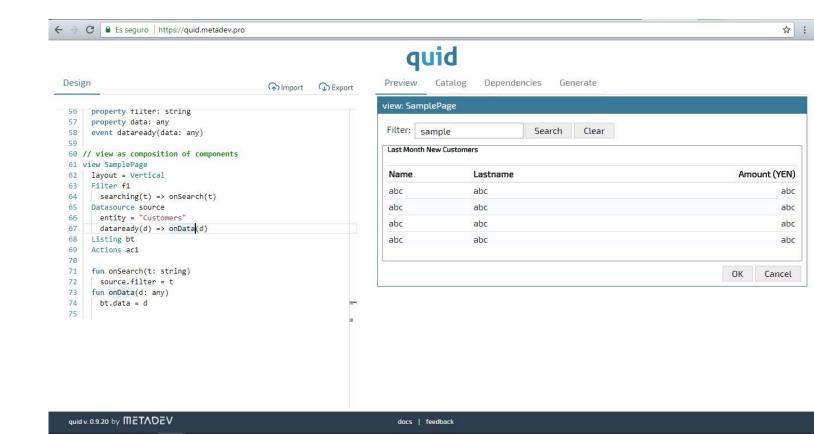

27 years later!

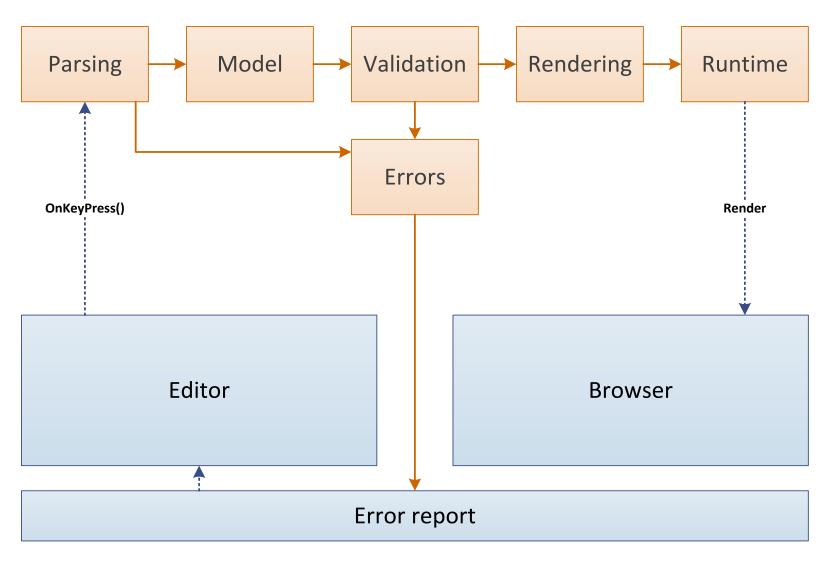

- Prototype **Web Components** on the Web https://quid.metadev.pro
- Explore different WC frameworks

Banking Project with **Everis** (2017-2018) for an US investment Bank

 Generation of 60-80% of user interface using the bank technology stack

Quid

Industrial Applications

- 60-80% of **UI code** generated for Intranet Apps (US Bank)
- 100% of code gen. build, pack and deliver **Native Mobile Apps** for Citizen Developers.
- Automatic generation and cloud deploy of BaaS from a model.
- Ensure Security Compliance by design
- Ensure Accessibility Compliance by design
- DIY: **Extreme customization**: cost-effective & Time to Market
- Process Tracking: Workflows and State Machines

Conclusions

- DSLs on the Web lowers the entry barrier for adoption
 - Zero installation costs
 - No more tooling upgrade nightmares

■ There is a **niche** for customer-specific & high-quality code generation where **compliance** is a must: security, privacy, accessibility, etc.
